## **ANYSIZE® Bottle Rinsers, Changeover Automation Product Line**

**Loveland, CO – Advanced Manufacturing Technology (AMT) introduces the patented Anysize® technology for Bottle Rinsers.**

**No more hand cranks.** Now, adjustments occur from the safety of the touch screen. **No more gearbox' backlash** that's making it impossible to get the pressure on the bottle *just right*. The Anysize rinser has INDEPENDENT zones for pick-up, rinse, and drop-off sections. A little variation in bottle diameters? That can be adjusted, on the fly, with the in and out arrows.

**Changeovers are genuinely automatic,** triggered by the bottle size selected at the filler. The RAD box remembers all the pressure settings for each bottle creating a bottle specific recipe.

**The “clean look” that every beverage plant strives to obtain.** A stainless-steel air cylinder is a lot easier to clean than multiple strands of roller chain. Besides, the roller chain is unsightly even when it is clean! **Anywhere in the world, where there's a hand-crank-style rinser, there are bottles on the floor.** What an opportunity for improvement! Saving a tenth of 1% will justify any rinser replacement project in months.

### ***About Advanced Manufacturing Technology and Flexibility Engineering***

*Advanced Manufacturing Technology and Flexibility Engineering developed and patented the Anysize® automatic positioning system for guide rails in 2008. It continues to expand the technology for use in all packaging applications that include multiple product sizes. Anysize® products are available through an authorized distribution network with technology management and R&D support by Flexibility Engineering.*
